Vision

1. Introduction

We have all been there , looking for a cabin to rent on the New Year's Eve and we had to search through a dozen of different sites, mail or call even more people and keep track of the pending offers or and also keep our group up to date with the state of the offers. This document will present the solution I propose for this problem.

1.1 Purpose

The purpose of Eve Cabins is to centralise all of the search and make it easier to keep track of the pending offers and also keep the “Party Group” up to date with with the progress of pending offers, and also help the cabin owners find tenants faster by making the communication between sides faster and easier.

1.2 Scope

Features :

- User authentication (register + login)
- Admin :
 - Remove cabin
 - Add/remove users
 - Delete groups
- Users:
 - add/remove cabin
 - manage their cabins(view pending offers,accept/deny offers)
 - create/delete a group
 - manage groups where he is owner(see/add/remove members, place offers in the name of the group confirm the renting)
 - group members should be able to see the group offers
 - place offers, see pending offers
 - see the accepted offers, confirm /deny the renting

1.3 Definitions, Acronyms, and Abbreviations

Party Group - the group of people that is looking to rent a cabin

2. Positioning

2.1 Problem Statement

The problem of	Renting Cabins for New Year's eve
affects	People who want to rent cabins for New Year's Eve People who have cabins for rental
the impact of which is	A long, stressful and frustrating process of finding and renting a cabin for New Year's Eve
a successful solution would be	To create an online platform where people can place offers for cabins in just a few clicks and easily check the status of their orders

2.2 Product Position Statement

For	Myself
Who	Wants to provide a better way to rent cabins
The Eve Cabins	is a Rent Offers Management System
That	lets users make/receive a renting request for Cabins
Unlike	AirBnb, Olx and other places where you can find real estate rental offers
Our product	Specialises on Cabins for New Year's Eve in order to reduce the clutter and simplify the search

3. Stakeholder and User Descriptions

3.1 Stakeholder Summary

Name	Description	Responsibilities
Admin	Administrates the application data and maintains the application running, and tries to ensure a nice user experience	Removes the groups of people that make troubles, and fake cabins

3.2 User Summary

Name	Description	Responsibilities	Stakeholder
Party Groups	people looking for a place where to spend the New Year's Eve	Look for cabins and place renting offers	they are a direct users
Cabin Owner	People looking to rent their cabins for New Year's Eve to people/groups of people looking for a place where to spend the New Year's Eve	Add cabins for rental such that users have from where to choose, also respond to renting offers	he is a direct user

3.3 User Environment

Users is considered to submit requests from his personal computer at home, in a non-stressful and calm environment

4. Product Requirements

The user must have a stable internet connection and a computer with at least 8 GB of RAM,monitor, mouse, keyboard and a Dual Core processor.
