Use-Case Model

1. Use-Cases Identification

Use case: Check Statistics

Level: Admin goal

Primary actor: Admin

Main success scenario:

- The admin opens the application
- System prompts to user-login
- Admin inputs their credentials
- Admin clicks login
- The system validates the credentials
- Admin is directed to homepage
- Admin is displayed special field for statistics
- Admin clicks “Statistics” button
- Admin selects the desired activity and desired period (last week or last month)
- User clicks “Get” button
- The system displays the statistics of the selected activity

Extensions:

- 6* Wrong credentials, user is redirected to login page
- 11* Not successful database retrieval, user is displayed a message that something went wrong, so that the admin should try again later

2. UML Use-Case Diagrams
