Use-Case Model

1. Use-Cases Identification

Use case: Create a service
Level: user goal
Primary actor: Vendor
Main success scenario:
1. The user opens the application
2. The system prompts the user to log in
3. The user writes his credentials and presses login.
4. The system accepts his credentials.
5. The user is redirected to the home page.
6. The user clicks on "Create Services".
7. The user is prompted to write detailed about their service, can add pictures.
8. The user confirms to send the details about their service.
9. After the service was confirmed, the system updates the database.

Extensions:
3'. The system rejects the users credentials.
9'. If the service was not confirmed, a message will be sent.
