Use-Case Model

1. Use-Cases Identification

Use case: Request consultation
Level: user-goal level
Primary actor: Patient
Main success scenario: If the patient does not have an account, he creates one and log into the application to complete a form and send an online nutritionist consultation request.
Extensions: The database or the server does not work, the login credentials are incorrect

Use case: Send diet to patient
**Level:** user-goal level
Primary actor: Doctor
Main success scenario: The doctor logs into the application, opens a request and provides the nutritionist consultation services as a list of instructions for a diet.
Extensions: The database or the server does not work, the consultation request form is incomplete

2. UML Use-Case Diagrams

2.1 Request consultation

2.2   Send diet to patient
