Use-Case Model

1. Use-Cases Identification

Use case: Check a medical investigation

Level: User goal

Primary actor: parent

Main success scenario:

1. The user opens the application
2. The application requests some credentials in order to log in
3. The user writes his credentials
4. The users clicks login
5. The system validates the credentials
6. The system redirect the user to the home page
7. The user goes to medical investigation page
8. The system highlight any mandatory medical investigation that is either overdue or soon to be overdue
9. The user marks the medical investigation after having it done as being done.
10. The system saves the medical investigation as done in database

Extensions:

11. The user does not mark an overdue medical investigation as done
12. The system sends an e-mail each week for a month to remind about that medical investigation that is overdue
13. The system warns the user on login about the overdue mandatory medical investigation
